

## Project Overview:

Thornbridge Brewery, based in the picturesque Peak District of England has been brewing craft beers since 2005 and has enjoyed a high level of growth as the quality of their beers became widely known and appreciated by a larger clientele.

As part of an ongoing expansion programme in their Riverside Brewery and to meet increased demand for their diverse range of beers, Thornbridge Brewery contracted T. Musk Engineering to source, procure and install 6 x 100hl (10,000ltr) Dual Purpose Vessels. Working closely with Musk representatives, MGT designed and manufactured all six Dual Purpose Vessels under a very tight deadline and delivered to the client facility in Bakewell, England.

## Scope of Project:

- ◆ TUV / CE Approval of design and manufacture of 6 x 10,000ltr Pressure Rated, Insulated and Jacketed Dual Purpose Vessels
- ◆ Shipment of 6 x 10,000ltr Pressure Rated, Insulated and Jacketed Dual Purpose Vessels to Thornbridge Brewery, UK
